## One-Touch Operation with Auto-Blend Sensing and Pre-Programming takes the guesswork out of blending

Richmond Va. – There's no need to waste valuable time standing over a typical blender when the Hamilton Beach Commercial Summit® Blender, with one-touch Auto-Blend technology senses when the perfect drink profile has been reached and shuts off automatically.

With hundreds of pre-programmed cycles, an entire menu can be stored on each blender and accessed in seconds. When a menu changes, simply update with new programs using the blender's USB port and any USB jump drive. Data on drink totals is also available and can be displayed per day, week or month.

The high performance Summit® blender is equipped with the Wave~Action® system, which produces a uniform mix from top to bottom by continuously pulling the contents down into the blades.

Built for durability, the Summit® Blender features a powerful three horsepower (3 HP) motor with an all metal coupling, and a jar pad sensor that shuts the motor down when the container is not in place (reducing the "wear and tear" of misuse). Dual fans keep the motor cool during heavy use and a unique airflow baffle lets cool air in while helping to keep liquids out. At Hamilton Beach Commercial, we call it Good Thinking.

## KEY FEATURES

**Perfect One-Touch Blending** — Patent pending Auto-Blend technology monitors blender power usage and speed for perfect consistency. The blender shuts off automatically when the perfect creamy profile is produced and detects and alerts the operator if cavitation (air pockets in the blending container) occurs.

**Wave~Action® System** — Unique Wave~Action® system delivers uniformity from top to bottom. No large chunks, fruit or ice floating on the top, no need for stir sticks. The system breaks down ice from a granita texture into a creamy drink profile.

**Pre-Programmed Cycles** — Hundreds of pre programmed cycles reduce operator time. A USB port makes updating the programming easy using a jump-drive.

**Durability and Design Extend Blender Life** — A jar pad sensor turns the motor off when the container is not in place to prevent misuse. Dual fans and a unique airflow baffle keep the motor cool and helps to prevent liquid ingress. The motor's all-metal coupling holds up to heavy usage.

**Easy-to-Use Features** — Easy to clean membrane controls, a timer with auto shutoff, stackable 64-ounce break-resistant container, Quiet Shield™ sound enclosure and either countertop or built-in configurations.

**Warranty** — Two years parts and labor or 20,000 cycles cycles, whichever comes first. Covered under the Express Care service program (U.S. only). See Web site for details.

**Model** — HBH850 Series

**Availability** — Immediately from U.S., European and Asian distribution centers.
